PROJECTS

Summer Internship :
Area:Data Mining

- ## Title : "Energy-efficient Query Processing in Web Search Engines"

    Abstract : Web search engines are composed by thousands of query processing nodes, i.e., servers dedicated to process user queries.
    - Such many servers consume a significant amount of energy,mostly accountable to their CPUs, but they are necessary to ensure lowlatencies, since users expect sub-second response times.
    - However, users can hardly notice response times that are fasterthan their expectations.

B.Tech :
Area:Web Development Project:

Title : "Library Management System"

- Abstract : It is a web application.It is useful to maintain the Library.In this application if anyone wants to read a book then he can borrow the book from the library and return to the library.

Area:Software Development Project:

Title: "Hotel Management System"

    Abstract: It is a software development project. It is useful to maintian the hotel.In this application if anyone wants to get the food or want to book a room then he can book and get the room in the hotel.And menu of the items and rooms will be displayed in the application.
